

Key National Takeaways

The final Senate bill was made even **more extreme than earlier versions** – it not only repeals incentives but places new taxes on solar and wind intended to kill these fast-growing U.S. industries

This bill will **increase household energy costs** – raising the average American’s electricity bills by 10% or \$400/year

The bill will **kill energy and manufacturing jobs** – eliminating at least 800,000 jobs and over \$500 billion in investment in the U.S.

The bill will **undermine grid reliability** – at a time of rapid load growth it will reduce overall energy capacity installed on the grid by at least 50% over the next 10 years
